

Eikon Exé by Vimar: elegance, excellence, prestige and customisation.

Eikon Exé by Vimar is the essence of material and form. A cover plate with squared and striking silhouettes, providing the perfect combination of precision technology and impeccable craftsmanship, available in a variety of materials and prized finishes, from stone, to metal and glass; it blends in seamlessly with any environment to create an original look every time, with stylish details that define the identity and personality of each environment.

Prized materials and finishes treated with a scrupulous machining process, carried out with painstaking care for every detail: from stone and metal machining, to the saddling of the bespoke die-cut leather, and the creation of the glass lighting device.

Each environment is enhanced by a unique, bold personality. The exclusive flair of Eikon Exé and its available control versions, traditional, Vintage, Flat and Tondo, lending the electrical system an unmistakable style.

The **Vintage** controls embrace the silhouettes of the past, restyling them with a modern twist to give settings an exclusive, retro style. The perfect colour coordination between controls and cover plate gives a total look effect that is pure and linear.

The Eikon Exé line with **Flat** controls is characterised by the essence of minimalism, purity and linearity: the square, flat shape of the controls gives a pleasant flush surface effect, highlighted by the uniform colours across the controls and cover plate, in line with the most current stylistic practices.

Last but by no means least, the elegant and discrete new **Tondo** control features a base with backlighting around the button. Both the Tondo and Flat controls are also available in the KNX and By-me Plus versions for home&building automation.

Eikon Exé offers a comprehensive range of solutions to customise your system and strike the perfect balance between styling and technology in the residential and hospitality industries. Special finishes and materials, countless colour combinations for both cover plates and buttons, customised symbols associated with the controls and laser engraved logos are the various opportunities for bespoke projects to add character to any facility. What's more, the series boasts over 200 aesthetically matching functions, also available on international product standards to accommodate any requirements.

For us, living should be an experience and we analyse every aspect of what the customer needs to identify the most appropriate solution to meet their unique styling needs.
