

Linea - Energy takes shape

Vimar has teamed its experience accrued over more than 75 years of tradition together with innovation, which has always distinguished its solutions and products, to **put together Linea**.

A new series of cover plates and controls featuring an unprecedented and elegant design, which brings together the understated allure of sophisticated styling with state-of-the-art technology. With Linea, innovation comes together with tradition, thanks also to **multiple patents** registered to make it truly one of a kind. Painstaking research and in-depth studies into design have given rise to a veritable item of interior décor, both discreet and distinctive, whatever the architectural setting.

Linea is intuitive: the distinctive profile and soft curvature of the controls makes interaction with the various functions immediate and straightforward. **Linea is elemental:** its minimal design leaves plenty of room for the control surfaces. **Linea is connected:** thanks to the smart and home automation system versions, it connects domestic settings with the needs of everyday life. **Linea is dynamic:** with the innovative XT platform, the automated home becomes a veritable sensory experience.

Distinguished by **minimal thickness**, Linea provides perfect **flatness** between the cover plate and the controls and is gently interrupted by the **delicately curved profile** of the **new aligned button**: its slight protrusion and the generous 53 millimetre surface thus makes it easy to find with your fingers, generating a satisfactory tactile silk effect provided by a special finish. Once activated, the control resumes its original position, guaranteeing **perfect alignment at all times** thanks to patented In-line technology. **Two elegant backlighting modes:** with the stylish square on the standard control or with a vertical beam of up light in the dedicated button which generates a soft glow on the cover plate and creates a charming luminous effect on the wall. **Axial controls**, which are precisely activated thanks to patented technology, further emphasise the flatness of Linea and the perfect alignment between the buttons and the surface.

Linea is born smart: more than 200 functions meet the needs for comfort, energy efficiency and safety of contemporary life. The ideal solution for refurbishments, to boost the functions of an existing system or in the event of a new system installation. Indeed, thanks to the View Wireless system, settings can be restyled and updated easily without requiring masonry work to control and manage lights, roller shutters, the temperature in every room, accesses and energy consumption levels remotely via App or voice assistants.

Linea is also natively for home automation systems, with two different designs to create a perfectly coordinated and matching connected system. The conventional modular bus platform for Home & Building automation has been supplemented with the

innovative **XT platform** that makes the By-me Plus home automation system an even simpler and more immersive experience. Controls featuring a flat design, extending across the entire surface and activated anywhere on the surface; highly ergonomic feedback based on microswitch technology and dynamic and customisable LED matrix icons; proximity sensor for icon activation as the hand approaches. The XT platform satisfies the latest styling and functional trends, offering an ergonomic and elegant design on the one hand and ample scalability on the other, as well as expandability of functions without intervening on the wiring. Attention to the smallest detail means the controls of the XT platform are also perfectly coordinated with the range of socket outlets, to offer a complete, innovative and top-performing system without compromising on styling. All the Linea controls are available in three different colours: **black, white and canvas** to blend in with any domestic context and stylishly match **various materials** and the **12 different finishes** painstakingly selected for the cover plates, resulting from specific eco-friendly processing.

Linea is designed to be sustainable: thanks to the use of plastic from recycled or renewable sources, to the optimised production processes, the efficient management of product volumes and the use of FSC certified eco-sustainable packaging, **a reduction of more than 80% CO₂ equivalent produced has been recorded, saving over 500 tonnes of CO₂ each year.** What's more, **97% of production contains plastic from renewable and recycled sources** originating from an ISCC PLUS certified supply chain (mass balance), contributing to a significantly lower environmental impact.

With Linea, we have redesigned energy.
